Labour Force Participation of the Elderly in Europe - The importance of being healthy

Phi Nguyen Julian Winkel Claudia Guenther

Statistical Programming Languages WS2017/2018

Ladislaus von Bortkiewicz Chair of Statistics Humboldt–Universität zu Berlin

Basics

Statistics is understanding data by modelling it.

Data $Y^{(n)} = (Y_1, \dots, Y_n)$ usually random.

 $\mathbb{P}=\mathscr{L}(Y^{(n)})$, the *unknown* joint distribution.

Statistical problem: to infer on \mathbb{P} from the data $Y^{(n)}$.

Parametric modelling:

$$\mathbb{P} = \mathbb{P}_{\boldsymbol{\theta}} \in \{\mathbb{P}_{\boldsymbol{\theta}}, \boldsymbol{\theta} \in \Theta \subset \mathbb{R}^p\}.$$

Nonparametric modelling: the parametric assumption is not fulfilled, or, equivalently, $p=\infty$.

Outline

- Attract the audience
 √
- 2 The scientific message
- Explain the method
- Simulations & discussion of your results
- Applications and examples
- Almost EOT = end of talk
- Provoke few questions
- O Audience: enjoy what you have learnt

The Beamer-Package

- Beamer is the latest package to create slides with LATEX
- □ Remember: PDFLaTeX accepts PNG, JPEG and PDF not EPS/PS

The LvB Beamer Style

- Ivblisting.sty, which must always be provided in the source folder.
- □ All operators are to be defined by \operatorname{}. Note the difference:

Var defined by operatorname Var not defined by operatorname

Remember to start and end the displaymath environment by \[and

\l and not \$\$.

Predefined comands

- For your convenience you may set up new commands via \newcommand{}{}.
- - ▶ Use \quantnet to include the quantnet icon (right-aligned):

MVAboxcity

The name of the quantnet is to be written in black.

Use \BBI{} to link to the BBI:

Carl Friedrich Gauss on BBI:

Equations

- Equations covering several lines may be written in the align environment instead of the older equarray environment.
 Only this way it can be ensured, that the colour of the equation and of the according equation numbering match.
- □ align* omits the equation numbering, as does \notag.

```
1    \begin{align}
2    4x + 8 &= (3-2)^2\\
3    4x &= -7 \notag \\
4    x &= -\frac{7}{4}
5    \end{align}
```

$$4x + 8 = (3 - 2)^{2}$$
 (1)
$$4x = -7$$

$$x = -\frac{7}{4} \tag{2}$$

Tables

Title	Title
2.13	1.45
3.14	6.85

Table 1: Include a short, but meaningful caption.

- Follow the Cambridge University Press Style.
- Tables and their captions are to be written in black.

Tables

```
\begin{table}
2 \begin{center}
 \begin{tabular}{cc}
4 \hline\hline
5 Title & Title \\
6 \hline
7 2.13 & 1.45 \\
8 3.14 & 6.85 \\
9 \hline\hline
10 \end{tabular}
  \caption{Include a short, but meaningful caption.}
12 \end{center}
13 \end{table}
```

Figures

```
begin{figure}[htb]

begin{center}

includegraphics[
    scale=0.2]{Figures/
    vola}

caption{Include a
    short, but
    meaningful caption
    .}

end{center}

end{figure}
```

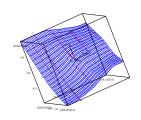

Figure 1: Include a short, but meaningful caption.

The caption is, as in tables, to be written in black and please provide any legend in the caption and not in the graph itself.

Q

Examples

To create an example, use the color isegreen and the following structure:

```
1 \color{isegreen}
2 \textbf{Example:} Example
    title
3
4 \smallskip
5 Here you can state your
    example, which may also
    include calculations.
6 \color{black}
```

Example: Example title

Here you can state your example, which may also include calculations.

Subtitles

Subtitles are to be highlighted via bold text and followed by a small skip afterwards (no colon):

```
1 \textbf{Subtitle}
2
3 \smallskip
4 Here you can state the
    content according to the
    subtitle.
```

Subtitle

Here you can state the content according to the subtitle.

This may also be applied to state proofs, theorems etc.

Brackets

- Conventional bracket rules represent an exemption of this rule. For example:

$$Y \sim N(\mu(X), \sigma(X))$$

□ Let LATEX take care about the correct size by preceding the bracket by \left and \right.

Rules to write nice slides

- Use \section{} and \subsection{} to structure your presentation.The section will appear in the upper right corner of your slides.
- You can set up hyperlinks via \label{LINKNAME} (reference point)
 and \ref{LINKNAME} (reference).
- Use, if necessary, \displaystyle to force LATEX to display fractions in big font size
- Remember
 - ► 6-8 lines per slide
 - 8 words per line

The numbering of any enumeration should match the colour of the corresponding text (preset colour: black). Modifications may be made through the *itemize* environment:

Itemize items are predefined (blue) and excluded from this rule.

Use ^{\top} to write the symbol of transpose, it produces

$$x^{\top}y$$

Use \ldots to write the symbol for three dots, it produces

$$x \in \{1, \ldots, n\}$$

The commands \widehat{} and \widetilde{} for a hat or a tilde are to be preferred over the smaller \hat respectively \tilde commands:

$$\widehat{Y}$$
 vs. \widehat{Y} \widetilde{Y} vs. \widetilde{Y}

- □ The norm is to be written via \|. It produces ||K||
- The O and O for convergence may be written via \mathcal{0} and \mbox{\scriptsize \$\mathcal{0}\$}.
- The operator for exponential terms with Euler's e as the base is defined by \exp:

$$\exp(1) \approx 2.718282$$

$$X \stackrel{\mathcal{L}}{\rightarrow} N(0, \sigma^2)$$

Use \operatorname{P} to write the symbol for probability, it produces

$$P(X = x) = \frac{\exp(-\lambda)\lambda^{x}}{x!}$$

Use \stackrel{\operatorname{as.}}{\sim} to write the symbol for asymptotic distribution, it produces

$$X\stackrel{\mathsf{as.}}{\sim} \chi^2$$

Use command \stackrel{\operatorname{def}}{=} to write the symbol for definition, it produces

$$X \stackrel{\mathsf{def}}{=} \frac{a}{b}$$

$$X = \Re\{Y\}, Y = \Im\{Z\}$$

 To write the symbols for the minimizing argument, use \operatorname{arg}\,\underset{x}-{\operatorname{min}}, it produces

$$a = \arg\min_{x} \{f(x)\}$$

Use \operatorname{\mathbf{I}} for the indicator function:

$$I\{x < 1\}$$

$$1 = \log\{exp(1)\}$$

Use \operatorname{E} to write the symbol for expectation, it produces

$$E[X] = \mu$$

Link Name

Using listings for source

Slides containing a listing also need [containsverbatim] as option. For 'highlighting' of XploRe keywords see listing.tex.

```
library("metrics")
randomize(10178)
z=(uniform(n).>0.5)~(normal(n).<0.5)</pre>
```

Piecewise Uncovering I

The following example uses < 1-2 > commands to piecewise hide and uncover text. < 1-2 > makes the first item appear only on slides 1 and 2, < 2-> has the second item visible from slide 2 onwards.

(i) First Roman point.

Piecewise Uncovering I

The following example uses < 1-2 > commands to piecewise hide and uncover text. < 1-2 > makes the first item appear only on slides 1 and 2, < 2-> has the second item visible from slide 2 onwards.

- can be uncovered or hidden

- (i) First Roman point.
- (ii) Second Roman point, uncovered on second slide.

Piecewise Uncovering I

The following example uses < 1-2 > commands to piecewise hide and uncover text. < 1-2 > makes the first item appear only on slides 1 and 2, < 2-> has the second item visible from slide 2 onwards.

- can be uncovered or hidden
- piecewise.
- (i) First Roman point.
- (ii) Second Roman point, uncovered on second slide.
- (iii) Last Roman point.

Piecewise Uncovering II

There is an easier way using $\langle tem < +- >$

Itemize environments

Piecewise Uncovering II

There is an easier way using $\langle tem < +- >$

- □ can be uncovered or hidden

Piecewise Uncovering II

There is an easier way using \setminus item <+->

- Itemize environments
- on be uncovered or hidden
- piecewise.

Text on the first slide.

Text on the first slide. Shown on second and third slide.

Still shown on 2nd and 3rd slide.

Text on the first slide. Shown on second and third slide.

- Still shown on 2nd and 3rd slide.

Text on the first slide.

Shown from slide 4 on.

Text on the first slide.

- Shown from slide 4 on.

Further Information

Further Information can be found in the LATEX version of this document, where some more details are explained and important specifications are highlighted.

Suggestions to improve the style or the explanations are welcome!
